

The Company

For over **40 years** Ecotherm has been operating in the field of **environmental engineering, consulting, technologies and integrated services**, offering solutions destined to the environment protection.

We are able to conduct feasibility studies, technical interventions and activity management.

Our mission is to guarantee the perfect works execution at the lowest time and costs by offering the best technical, environmental, social and economical solutions.

We help companies to face the complex challenges of the ecological transition. We identify cutting-edge solutions for our clients that anticipate tomorrow's scenarios to strengthen their competitive advantage and protect their value today.

Our history

1975

Company's core business was the industrial **remediation, cleaning of large refinery tanks and waste disposal.**

1998

Ecotherm started to perform **remediation activities and consulting** on contaminated sites. The company started a **continuous growth** in this field.

Today

In order to guarantee **quality targets** to its customers, Ecotherm has invested in people, innovation, training and research.

What do we do?

We develop and implement solutions for environmental protection and remediation.

We offer an **integrated environmental consulting service**. We ensure both compliance with **regulatory obligations** and **assessment** of the state of operations, developing plan and design of required activities.

We support companies in the study, analysis and understanding of **environmental changes** induced by anthropogenic activities and in their **ecological transition process**.

We carry out remediation of **environmental matrices** and remediation of **contaminated sites** and industrial installations, including the management of **produced waste**.

Key Facts

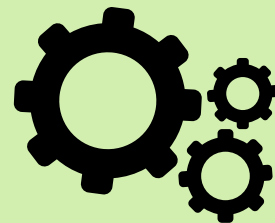

- We have **40 years of specialized experience** in environmental and remediation consulting and operations
- **Revenues 2022:** 14.300.000 € (+34% Vs 2021; +82% Vs 2020)
- We operate through **5 structures** with headquarter in Pomezia (RM) and offices in Rome, Asti, Genoa, Cagliari
- We have more than **130 employees/collaborators** of which 80 are engineers and geologists
- We have completed remediation work on over **2000 contaminated sites**
- We have installed over **400 remediation and MISE systems**
- We have an environmental **emergency response unit** available for 24/7 operation in case of emergency
- We have a unit of **engineering and construction** of remediation plants of the subsoil
- We have a large **operating vehicles fleet**
- We have our own **waste management and treatment plant**

AREAS IN WHICH WE WORK

Our customers

Our Network

Ecotherm plays an **active role** in numerous associations and technical organizations in the sector by participating in and/or coordinating working tables, initiatives and research projects in which we make our know-how and our people available.

We believe that Safety is a fundamental value. We are committed to continuous improvement of safety standards at the workplace and of workers' protection systems.

We are committed to ensure ethical management of work for our Customers.

Our **consulting activity** on health and safety in the workplace covers specific areas:

- Compliance with D.Lgs.81/08
- ISO 45001 compliant management systems
- Construction site management
- Training and consulting
- Incentives for companies

Environmental Engineering and Consulting

We support our Customers in the pursuit of compliance with current environmental regulations. We guarantee consultancy in the **interventions design and remediation techniques**, research for the study of areas, evaluation of environmental liabilities and due diligence, technical and regulatory analysis, geological and geotechnical studies, environmental impact studies and land use planning, technical-economic and economic-financial feasibility studies.

Underground Remediation

Our specific **25-years** experience guarantees the achievement of results for our Customers. The solutions we offer cover **all phases of assessment and possible intervention**: from preliminary investigations to risk analysis, from remediation design to the realization of the intervention, from monitoring to certification. Throughout the process, we manage communications with authorities to ensure **regulatory compliance and protection of the interests** of the Customer.

Industrial Remediation

We design and carry out **industrial remediation** aimed at decommissioning entire production units or single sections of plants and we deal with the disposal of the residues produced.

We are specialized in supporting clients in the investment sector for the management of **real estate** assets, with studies of environmental liabilities and solution procedures and, where necessary, with **operational interventions of strip out, waste removal and asbestos remediation**.

Waste Management

We provide a specific consultancy in the field of **special waste management**, dangerous and not, providing our customers with solutions in line with their different needs, in full compliance with industry regulations.

Thanks to the know-how acquired in over forty years of experience, we offer the **best technical and economic solutions** with our storage, recovery and disposal of dangerous and non- dangerous waste, located in **Dusino San Michele (AT)**.

Our Disposal Plant

The plant is in a strategic position along the route **A26**, just few kilometers away from Turin area. It has an extension of **6,500 sqm**.

The site is authorized to treat **82,000 tons per year of industrial waste**, with both disposal and recovery processes, allowing the application of modern circular economy techniques.

The plant can receive **liquid, sludgy and solid waste**.
